

BESAM PRODUCT RANGE

We open all doors

Besam designs and builds automatic door systems that meet every need of our customers with uncompromising excellence and quality. We deliver complete entrances to ensure the best combined function and appearance.

Besam door systems can be precisely matched to suit the specific requirements of a broad variety of individual projects. Widths, heights, profiles and sensors can be adjusted to create an automatic door to fit the exact demands of any project. This flexibility allows the widest possible utilization of advanced automatic doors without compromising reliability and attractive design.

Besam acts as a partner throughout the door system's life cycle to assure continuous trouble-free performance. Our strong after sales organization gives fast, efficient quality service and maintenance.

Global market

With a global clientele and sales in some 70 countries Besam has the widest installed base of automatic doors in the industry. Since it was first established in 1962, Besam has come to specialize in a variety of automatic door solutions for a number of key industries within the retail, healthcare, transportation and hospitality sectors.

Safety is a trademark

The Besam automatic door systems offer a high degree of safety. The different doors automatically reduce speed, stop moving or reverse when the sensors detect a stationary object. As soon as the obstruction is cleared, your Besam door will continue normal operation without delay.

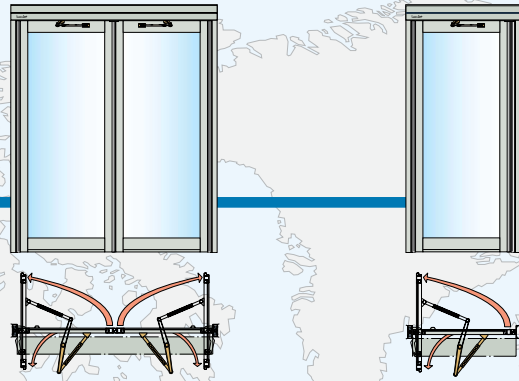

Emergency escape

Most door systems can be supplied with an emergency break-out system that enables the doors and side screens to be swung outwards in an emergency situation by applying light pressure. This allows exit through the entire door space.

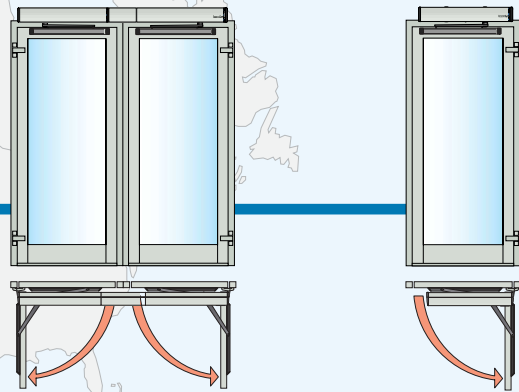

BESAM PRODUCT RANGE

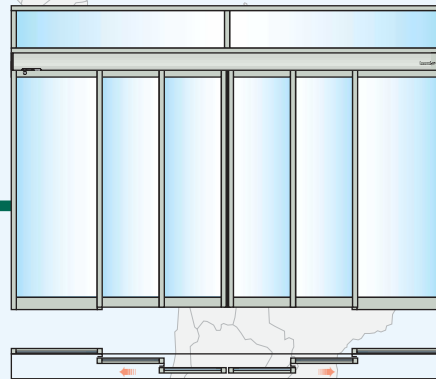

BALANCED

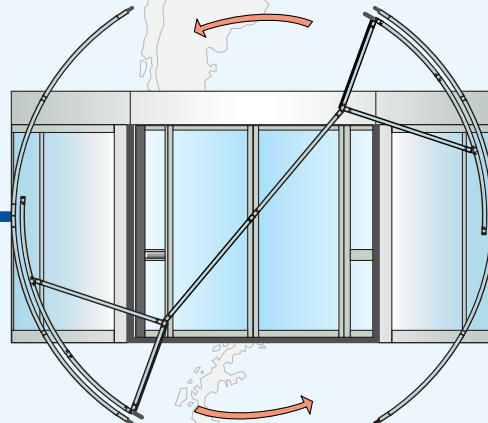

SWING

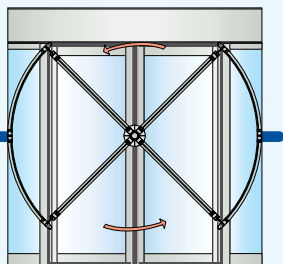

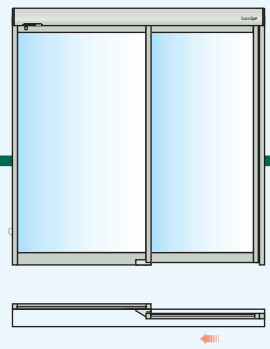

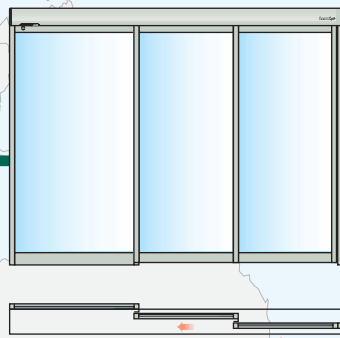

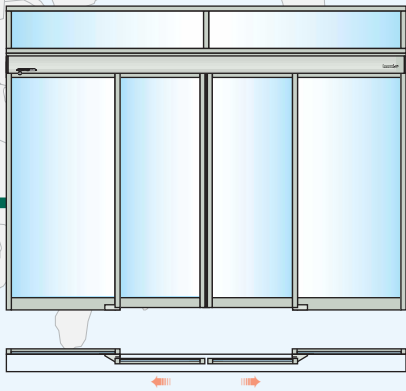

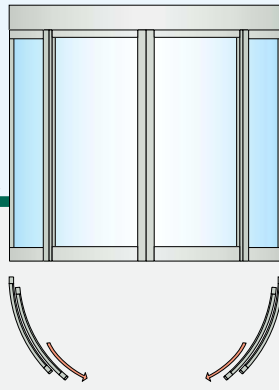

SLIDING

REVOLVING

CURVED

Frame

The sturdy solution for areas with high traffic and where trolleys are passing in and out. Framed all round by clear anodized aluminium profiles, with 8 mm laminated glass, as standard.
